Platform Mirrors

Railway Platform Mirror

This special purpose mirror is designed for viewing along railway stations for driver only passenger trains. The 900 x 1200 mirror provides a large clear image of the platform, allowing the driver a detailed view of the platform and the side of the train. The driver has a clear view to ensure that all passengers have cleared doorways and that it is safe to move off.

The flat glass vinyl backed mirror has an inbuilt heater/demister to prevent fogging on cold wintry days which keeps the mirror clear and dry at all times.

The separate mirror assembly is housed in an all steel enclosure and is protected from vandalism by a field replaceable polycarbonate shield. The shield is made from a high performance polycarbonate which is both uV and scratch resistant. At over 9000lb/in² breaking strain the mirror is truly protected from expensive damage.

The outer enclosure is zinc plated and powder coated to your choice of colour. The weather shroud has been designed to provide the mirror with the maximum shading without sacrificing the angle of view.

The platform mirror is designed to mount direct to a 113mm diameter post and is adjustable in both planes.

Electrically heated mirror for mist free vision in all weather.

- All steel construction
- Zinc plated for corrosion prevention
- Powder coated finish
- 1200 x 900 mm mirror surface for maximum view
- Flat glass mirror
- Field replaceable anti-vandal protection screen
- 200 Watt electrically heated anti-frost mirror
- Thermostatically controlled cut-off
- Waterproof termination box & cable gland
- Neon power indicator
- Hi-tensile U bolts
- Two plane adjustment
- Designed and made in Australia

'The platform mirror is mounted to a steel post and can be offset as well as adjusted in both planes'
